

ABSTRACT OF THE DISCLOSURE

The present invention discloses the use of natural, commercially available Humic Acid preparations in the treatment of human immunodeficiency virus (HIV) through its demonstrated anti-HIV-1 effect, anti-syncytia formation effect and/or immunostimulation of IL-2. The Humic Acid preparations hereof are thus useful in the treatment of HIV and AIDS and are described as particularly useful alone or as adjuvants to be co-administered in immunovaccinations against HIV.
